

Brother scanners help make data management more efficient for Pennine Care NHS Foundation Trust

The trust provides mental health and community services to 1.3 million people across six boroughs of Greater Manchester. Its workers need to record and organise large volumes of patient data while operating busy schedules and visits across a large geographical region.

The benefits:

- ✓ Brother supplied the trust with ADS2100 and ADS2600W scanners, allowing digital records to be created. As a result, they are now more secure and easier to search and access on the move.
- ✓ Cost-effective and robust units give carers a quick and easy way of creating digital records, with one-touch shortcuts to the most commonly used functions
- ✓ The scanners are integrated with a new digital patient record database introduced by Pennine Care, known as PARIS
- ✓ Access to scanners both at central office and at home gives carers extra flexibility in information handling, saving time and reducing road miles

Cost-effective scanners

make patient record-keeping more secure and easier to access

Integrated solution

works alongside Pennine Care's existing IT system, including a newly-launched central database for digital patient records

Increased flexibility

means care workers, who can now create digital copies of paper records at home or in the office

“Effective and efficient record-keeping is hugely important for our social workers in the field, and we’re committed to making the process as easy for them as possible. The Brother scanners are simple and reliable to use, and have created a quick and efficient way to create digital versions of patient notes.”

Rizwan Majeed, ICT Support Manager at Pennine Care
